

Juvederm[®], Voluma[®], Volbella[®], Vollure[®] and Restylane[®] (Hyaluronic Acid), Radiesse[®] (Hydroxyappetite)

USES: Fillers and volumizers are designed to restore facial contour and reduce the appearance of lines and wrinkles due to aging. Typically, Hyaluronic acid fillers are used to add definition to the nasolabial folds, the lips and fine lines around the mouth. Voluma[®] and Radiesse[®] are used as a deeper facial volumizer to enhance the cheeks (moldable cheek implant) or correct early jowling and restore a natural jaw line.

PROCEDURE: Office based injections of hyaluronic acid or hydroxyappetite with a small needle into fine lines around the mouth, the forehead, or to add volume to the cheeks, forehead, lips, nasolabial and marionette depressions.

LENGTH: approx. 30 minutes **Office Procedure with topical anesthesia/dental blocks**

SIDE EFFECTS: Temporary stinging, fullness, faint redness, bruising requiring cover-up

RECOVERY: Immediate. Chance for mild bruising for 3-5 days. Mild swelling for 3-4 weeks as filler smooths into tissues. No makeup for 24 hours after treatment. Mild soap and water, facial wash only.

DURATION of RESULTS: 6-18 months

OFFICE VISITS: 1st and 2nd (if needed) treatment 4 to 6 weeks apart

BEFORE TREATMENT: Avoid aspirin or ibuprofen at least 48 hours prior to the treatment. **No makeup** in areas to be treated before arriving for treatment.
